

## UTAH LOOKS TOWARD TOOLE

## 1,500 TON SMELTING PLANT TO BE OPENED IN JULY.

(Continued from page 1.)

Company) to continue extension of the plant for two years—two prospects in the Black Hills—North and South—Colorado Tunnel Progress.

SUN LARK, May 4.—July 23 will be a great day in Toole. The opening of the new international smelting and refining company's plant will be celebrated. The smelter will be in operation in a few days, with an initial capacity of 1,500 tons. It will work three shifts of 120 or 150 men. The 600 men engaged on construction work have been notified that they will be required for two years, an indication that the company will extend its building operations on a large scale. The Utah consolidated, it is expected, will be in position to deliver ore to the bins over its new railway by June 1. The international will accumulate a large quantity of ore before the plant is blown in.

The new assurances have been out on the Utah Standard on the 700 foot level, one by the west drift, 200 feet from the shaft; the other by a short drift in a northwesterly direction from near the face of the main southeast drift. The west drift fissure is especially promising. It carries two feet of low grade ore and it is in handsome dimension.

The showing quantities of native silver and native copper has been expected in the lower Mammoth between the 1,700 and 1,800 foot levels. The ore is exceedingly rich, but the management does not wish the impression to go abroad that there is a great deal of such fine ore. They hope to find more of it on the 2,000.

Inman, Winder and others have just received \$25,000 for their placer ground near Wilson mesa, near Moab. They also received an offer of \$15,000 for a three year bond. Arrangements have been made for the shipment to the mesa of a fifty stamp mill.

Next Consolidated surprised its shareholders last month by declaring a 4 per cent. dividend, paid on April 20. The dividend was about \$30,000.

The last Tintic Development Company, it is reported, has opened a vein of ore on the 400 foot level, which is of greater value than any yet found in the workings. The vein runs southeast and northwest and is in place for the ore body that goes down from the upper levels.

After a brief shutdown the zinc concentrating plant at Park City of the Idaho-July-July company has resumed work. The result of bad roads. In March 533 tons of crude ore, 770 tons of concentrates and 10 tons of zinc millings were marketed. This month some new ore from the Black Hills is to be marketed.

There is much interest in Ohio Copper, Inc.'s property at Tintic. It has raised \$100,000 through the issue of bonds secured by the company's bonds held in trust. This was used to pay for the cost of doubling the capacity of the mill. The two units now in operation are treated with 1,200 tons of ore a day. The monthly output of copper by the company is about 1,000,000 pounds. Concentrates from the Tintic are shipped to the Hartford plant of the Guggenheim.

The old Honore in the Stockton region, where the Bullion Coalition Mines company, comes to the front. The ore body has just been broken into showing a face of five feet of ore, two feet of which runs between the veins and at least 25 to 30 ounces of silver to the ton. The importance of the strike lies in the fact that the characteristic silver-lead found on entirely new ground on the Honore vein.

Montana. The Blossom stock has taken a jump on reports of pay ore in the rise from the 300 foot level. The east drift on that level is in open place and contains ore without pay value. The new discovery has attracted the regular ore body, which toward the south dips downward from the 300 foot level. The report is that the ore is encountered in the rise is characteristic silver-lead product of the Colorado ore channel.

Butte, May 4.—The rapid decline, followed by the advance and then a decline again of the Butte stock, has been accompanied by the annual report of the company, has caused much inquiry. The report, however, is not the cause of the decline. The levels of the property caused an advance in the stock, but the unfavorable report followed almost immediately. It is concluded that should a reported strike prove correct it will be many months before any of the ore is brought to the surface. In the meantime, while there are large bodies of ore on the upper levels ready for shipment, the grade is not high enough to be profitable. It is sufficient to justify the continuance of dividends at the present time. Officials will report affirming the report of the new discovery of ore.

The Davis-Daly Company is still idle so far as shipping ore is concerned. When it will be in a position to ship any from the Colorado mine to the Basin concentrator is uncertain. The matter depends on the decision of the Supreme Court of the State as to the injunction of the lower court restraining the company from laying off the mine. The Davis-Daly Company, with the Great Northern Railway and reach the concentrator. In the meantime the stock is declining. The Davis-Daly Company is said to be in a position to ship ore to the concentrator. It is said that the Colorado mine has a large quantity of ore blocked out and that notwithstanding there is no prospect of making shipments for some time the Davis-Daly Company is in a position to ship ore to the concentrator. The Eastern engineer who has been here making an examination of the property has completed his task and it is expected that he will make his report in the next week or ten days. He represents the people who are concerned in the property to buy 70,000 shares of the treasury stock, through the sale of which it is believed an assessment will be made.

If the influence of President Hickey of the Tuolumne company goes for anything else, the annual report of the Davis-Daly Company will be declared. Mr. Hickey says: "Our April production will exceed the March, and during the month of May we will mine, including the producing of the copper bars ready for shipment, was four cents a pound. In addition to this our stock is being sold at a profit. Our sales within a small amount of paying our mining expenses."

Butte Superior concentrator is not yet started, but Manager Atwater declares that work of concentration will be started in the near future. The delay has been due to non-arrival of material.

London parties are negotiating for the purchase of the Blue Jay group of mines located on Cedar Creek on the Montana side of the Four d'Alene district. An offer of \$25,000 has been made with a cash payment of \$5,000, the balance to be paid at various times within a year. The claims have been developed to a considerable extent, and it is said a fine showing of copper has been made. The vein has been found for more than a mile and is said to be twelve feet wide. On the apex of the ore about a 35 foot shaft has been driven in the bottom of which has been discovered a high grade of copper.

So far as this district is concerned the meeting that of the Parrot, has distributed \$25,000 in cash to the shareholders. The Parrot is a subsidiary of the American Consolidated Copper Company. The company has 149,000 shares of the 150,000 shares of the Parrot. The company has been developed to a considerable extent, and it is said a fine showing of copper has been made. The vein has been found for more than a mile and is said to be twelve feet wide. On the apex of the ore about a 35 foot shaft has been driven in the bottom of which has been discovered a high grade of copper.

## MINE PUMPS.

SEATTLE, May 4.—The latest Idaho reports are so favorable from Fairbanks that thousands of people from the outside. This report expects a heavy movement to come to the Fairbanks district. The value is being reported by the Fairbanks of the Northern Navigation company pays the company will be \$100,000.

## COBALT FACTS.

1000 Million. Will be forwarded on request.
